FLASHCrest Website Blocker is a small utility for blocking access to annoying websites. It's compatible with Windows XP, Vista, 7, and 8. You need to install the application with administrative privileges, and then run the software with admin privileges. The tool displays a simple interface and lets you define a list of websites to block. Some of the websites may be blocked permanently, while others may be enabled with a single click. The changes can be applied quickly and easily with a click. Key features: - Fast task completion, without errors; - Ability to block the websites permanently; - Control over updates; - No more ads! Installing the program Before we get started, we need to download FlashCrest Website Blocker from the website below. Click on the download button and choose the tool that suits your needs. You should note that the download is usually around 300 MB. The software is easy to install and easy to use; simply follow the wizard's prompts and continue with the installation. We can also obtain FlashCrest Website Blocker from the author's official site. Eager to make use of the program? Don't miss our detailed manual about FlashCrest Website Blocker. How to block websites with FlashCrest Website Blocker: After the installation is completed, launch FlashCrest Website Blocker and open the start menu. It's possible to access the tool's control panel by using the menu on the left-hand side. Let's have a look at the configuration settings and the utility's features. First of all, you should check the list of websites that should be blocked. You can do this with a single click, or simply type the URL of the website to be blocked in the input box. You can also select a subdomain, domain, or file to block, depending on the website you want to block. You can make use of the filtering features in case you wish to improve the speed of your surfing by blocking ads and unwanted updates. Disable unwanted updates In the update tab, you can use the Reset button to turn off Windows Update. You can also stop Adobe Reader from appearing in the notification area when it detects a new PDF file. In case you wish to stop the Flash Player from appearing, simply disable the checkbox in the Plugins tab. Let's keep an eye on the advanced tab. You can
