iphone or android. the most important feature is, while playing, you can click on the controller to switch to the analog stick. it does have a few minor bugs, but if you like dlc battle packs, and would like to play online, the times up for you!Q: SharePoint OData query with ":" separator I'm trying to write an OData query to return documents in a sitecollection. The query below works when used with a wildcard character. For example, if I want to return documents where the document name ends in a particular phrase, I'd do this: `_api/web/lists/getbytitle('My`

`Documents')/items?$filter=endswith(DocName,'my phrase')` I'd like to write a query that allows me to specify a ":" separator, for example, that would allow me to return documents where the title ends with "my phrase:xyz". I tried adding a quote around the ":" separator, and the query returns no results: `_api/web/lists/getbytitle('My Documents')/items?$filter=endswith(DocName, "my phrase:"xyz')` Is there a way to escape ":" in an OData query? I tried using backslash, but it didn't work either: `_api/web/lists/getbytitle('My`

`Documents')/items?$filter=endswith(DocName,'my phrase\;xyz')` A: You can't escape a ":". It's a special character in a regular expression. `_api/web/lists/getbytitle('My Documents')/items?$filter=endswith(DocName,'my phrase:"xyz')` Notice the quotes around "my phrase" are not "regular quotes", but "regex quotes". They tell the query to interpret "my

---

phrase:xyz" as a regex expression instead of a literal string. So the result is the same as if you didn't escape the colon: `endswith(DocName,'my phrase:xyz')` Q: ASP.NET MVC customize error message I'm developing a ASP.NET MVC application, and in the case the application encounters an exception I need to show a customized message and not the standard MVC error page. My problem is, how
