The aim of this study was to investigate the effect of cigarette smoking on the ability of inhaled nitric oxide (NO) to reverse hypoxemia in patients with chronic obstructive pulmonary disease (COPD). After obtaining informed consent, 31 patients with COPD received 100 ppm NO for 20 minutes, with and without smoking a cigarette. Inhalation of NO was discontinued, and arterial blood gases were rechecked 15 minutes later. There was no statistically significant difference in the mean PaO₂ values with and without cigarette smoking. The difference in PaO₂ in patients without cigarette smoking decreased from 7.4 +/- 1.6 to 2.9 +/- 0.9 mm Hg (
