Website Puller Crack Free Download

Website Puller is a Windows freebie designed to download either an entire website or just the selected items, providing a reasonable download speed and an easy to use interface. Designed with a single goal in mind and thus helping you download websites or the defined items, Website Puller has no dedicated settings menu to play with, but instead it offers its users a much more straightforward approach. First of all, users are required to provide the output folders where all downloaded files are supposed to be saved, but also configure the items to be downloaded. Users can choose between the entire website and certain items, such as images, text documents, audio, archives and videos. The drawback is that it doesn't allow you to choose specific formats. Last but not least, the application prompts users to provide the URL to get items from, but keep in mind that the "http" syntax before the URL is mandatory to let the program work properly. The download process starts from the moment you press "Go", with the overall time needed to complete the job depending not only on the size of the selected files, but also on your Internet connection speed. The good news is that Website Puller doesn't affect system performance and gets along very well with all Windows versions. All things considered, Website Puller does what it says with minimum effort, providing just a few configuration options and thus becoming an appropriate tool for both beginners and those with a bit more computer experience. It's fast and reliable and, what's more, it boasts a very intuitive approach that doesn't scare away rookies. Free Website Puller Full Version Download.
